

In the Abstract

Please amend the abstract as follows:

~~The invention relates to a~~ A system which is used for the dynamic production of images and the transmission of said such images to remote terminals (14, 16, 18). ~~The inventive system consists of a~~ A server comprising an image database (12) and ~~means (12, 20, 25) which are used to~~ can process images intended for the terminals and which can convert said such images into respective formats that are compatible with the remote terminals. The aforementioned image database is a database of vector images. ~~The above mentioned processing means comprise a~~ A set of tags ~~which~~ are integrated into the vector images and which cause the images to be manipulated in order to make same compatible with the remote terminals and ~~means of generating~~ to generate images which can be read by the terminals from the manipulated images.
